

# AIRCARE SYSTEM

## KEY BENEFITS OF USING THE PROCTOR GROUP AIRCARE SYSTEM

"Dust, Cobwebs, Condensation, Humid Atmosphere and Damp Beds" a precursor to pneumonia and health problems and yet standard conditions for housed livestock. A lack of adequate ventilation leads to a build up of ammonia and micro organisms.

Proctors Aircare system has been used to ventilate over 4000 Calf and Cattle buildings helping to prevent pneumonia and other health problems.

The Aircare ventilation system ensures;

- Positive air movement
- Air distribution to the animals immediate environment
- Drier beds
- Simple installation
- Low running costs
- Variable ventilation rate

With the use of machines for bedding up increasing dust levels in cattle sheds, also milk machines leading to areas of calf pens with higher activity, then ventilation of calf and cattle buildings houses is more important now than ever before.
